Finest Quality Flooring Profiles and Accessories

August 2020

Sustainability policy statement

C.A.T Ltd manufacture high quality, competitively priced, floor finishing trims, stair nosings and wall corner protectors in Brass, Stainless Steel, Aluminium and PVC materials.

The metals we produce all have a high content of recycled material, typically 90-100% of brass profiles, 30% of aluminium extrusions and 60% of Stainless Steel.

At the end of their working life these products are 100% recyclable and the aluminium, brass and steel material can be re-used an infinite number of times. There is usually a monetary value for the scrap.

C.A.T. Spectrum KSP PVC profiles and Stair Nosing Infill finished products contain 30% of recycled material by weight. KB Bases are extruded using up to 80% re-cycled material.

Our commitment to quality ensures that, where C.A.T. trims are used as recommended, they will last longer than inferior products, meaning they require replacement less often. This can lead to reduced project lifetime costs and lessen impact on the environment.

C.A.T. Ltd. comply with all relevant environmental legislation and regulations.

Whilst BREeam and LEED classification does not currently include floor finishing trims, we are determined to engage in the spirit of these schemes and work towards minimising our environmental footprint.

All metal off-cuts and waste are sent for recycling.

All paper and cardboard waste is collected for recycling by an approved and licensed operator.

Manufacturing waste from PVC products in our factory is processed and re-used in making new products.

Wooden crates, in which our raw material is supplied, are broken down and re-used in our packing system wherever possible. Surplus material and pallets are given to local collectors for repurposing or recycling.

All the timber used is FSC certified.

Wherever possible we are reducing the use of plastic packaging materials, however, we will only do this where there is no detriment to ensuring our products are delivered to the quality standards we expect. Alternatives are actively being sought.

We are committed to reduction of waste and improving energy efficiency.

Our transport operation is planned to be as efficient as possible and are constantly monitoring performance.

We regularly review our working practices to ensure we are continuing to reduce our environmental impact.
